

# DREAM TECH/TOOL

Imagine suddenly you have the power to design the technology tool for teaching of your dreams, unrestricted by cost, achievability, skills, the laws of physics, etc. What is it? What are its features? How does it work? First describe the tool on this page. On the facing page, create some kind of visual representation of the tool, its interface, it being used, etc. Feel free to interpret 'tool' or 'technology' as broadly as you like
