

How to Make a Polymer Clay Pumpkin Tutorial by KatersAcres

Easy Polymer Clay Pumpkin Tutorial

 KatersAcres.com

Instructions:

-
- Use any size ball of clay that you want your pumpkin to be.
- Roll into a perfect ball and set it on your work surface.

- Using your dotters (or the end of a paint brush as shown) poke a gentle hole in the top of your circle.
- Using a [needle tool](#) place the tool on the top ridge of the opening and ROLL the round toward the bottom.
- Repeat this process as many times as you want until your pumpkin has the rounded “pumpkin” look.
- **NOTE:** I generally make 8-9 segments per pumpkin.
- Then sculpt a simple [leaf shape](#) and insert it into one side of the hole.
- Make a simple stem and also push it into the hole.
- That’s it – you’re done!
- Bake your pumpkin according to the directions on the package!
